

## SPOTLIGHT SOLO STRINGS INSTALLATION

After you have unzipped the provided files:

1. Create a folder where you want the actual Spotlight Solo Strings Library to reside on your system. You can put it anywhere on your system, and name it anything you like. For instructional purposes, let's call it "Spotlight Solo Strings" for now.
2. Keep intact the folder and file structure, and place them all in the folder "Spotlight Solo Strings" that you created above:

3. From within Kontakt 5.3 or newer, navigate to any instruments folder. (If you are using Kontakt 5.8 or newer, you will need to navigate to "instruments 2.0". Other older instruments are known to crash.)

Since this library requires the full version of Kontakt (not the free player version), you do not need to go through the "Add Library" process of

authorization.
